Introduction

The Coronavirus Disease 2019 (COVID-19) pandemic caused by the SARS-CoV-2 virus continues to accelerate exponentially in many countries. Large and small economies have faltered, many people have died, and some survivors report experiencing what is described as *long covid* post illness complications involving most body systems, the brain – strokes, dementia, heart – arrests or failure, lungs, kidney and liver failure.

The Cook Islands Emergency Response to COVID-19 has evolved and developed due to the knowledge gained from international health systems and successful health and societal systems' responses. Infection prevention and control measures, in particular, non-pharmaceutical interventions (NPI) have been the cornerstone preventative measure implemented in 2020. This will continue beyond the period when effective vaccines and therapeutics become available to the Cook Islands population. Surveillance activities including laboratory testing for COVID-19 helped guide decisions regarding border restriction measures beginning 31 January 2020 until 25 March 2020 when the Cook Islands border was closed to international travellers. Following the declaration of the Cook Islands as a COVID-19 free zone on 16 April 2020, travel exemptions have been provided to returning Cook Islanders and permit holders.

Good public health measures can help in the recovery of the Cook Islands economy. With growing confidence in the preparedness, readiness and response activities undertaken, the national response is gradually shifting to focus on the social and economic recovery of the Cook Islands. This coincides with plans to establish a quarantine free travel arrangement between the Cook Islands and New Zealand. Key to the success of this arrangement is a plan that pulls together the various strands of preparedness and readiness work, as well as response measures to contain, mitigate and eliminate COVID-19 cases should they arise. This requires careful planning as the country moves closer to the time when proven vaccines and therapeutics become available in 2021.

Purpose

This plan outlines Te Marae Ora's Ministry of Health Cook Islands ([Te Marae Ora], TMO) health and community systems readiness and response operations for COVID-19 scalability to containment and mitigation. This is an essential component of the Cook Islands Emergency Response Plan to COVID-19 to keep out, control, and eliminate COVID-19 in the Cook Islands.

Legislative Framework

Several legislative documents guide the national response to COVID-19.

- COVID-19 Act 2020
- Public Health Act 2004
- Disaster Risk Management Act 2007
- Ministry of Health Act 2013

The epidemiology of COVID-19

SARS-CoV-2, is mostly transmitted through the following modes: (1) Large droplet spread; (2) Transmission through aerosolised spread (for example coughing, sneezing); (3) Contact – direct or indirect – with respiratory secretions (for example contaminated surfaces). Recent reports of a highly transmissible strain (50%) is of concern. The incubation period (time between infection and onset of symptoms) is estimated to be 14 days, however, this could extend to 28 days. While some cases are asymptomatic, virus transmission is thought to occur during the pre-symptomatic and asymptomatic period. For the majority of cases: 80% are mild, 5 to 15% may or may not require hospitalisation, while 5% usually require ventilation in intensive care unit settings. Post illness complications of long COVID-19 are a concern.

National leadership and governance

The whole of society and nationwide emergency response to COVID-19 was led by the Prime Minister along with the Minister of Health, Cabinet, and Parliament (Annex 2). Critical intelligence and planning entities such as the National Disaster Risk Management Council, Central Agency Committee, and the National Health Emergency Taskforce (NHET) provided advice to Cabinet.

Other stakeholders who have remained involved in the implementation of the national response include: House of Ariki (traditional leaders); Religious Advisory Council; government agencies; non-government organisations; Rarotonga and the Pa Enea Puna; Disaster Risk Management Committees; international partners and the private sector.

Incident management, planning, administration and coordination

The NHET was activated in January 2020. Chaired by the Secretary of Health, recommendations from the NHET were presented to the Minister of Health and Cabinet Ministers.

The National Incident Management System (NIMS) and Health Incident Management System (HIMS) were activated in February 2020 and stood down on 5 May, shortly after the Cook Islands was declared COVID-19 free on 16 April 2020. Te Marae Ora Executive continue to lead the health response, while concurrently overseeing the delivery of business as usual health services.

The frequency of emergency response meetings are reduced and all those seconded to Te Marae Ora and other emergency response agencies have returned to their usual workplace. NHET meetings are held monthly.

Health systems strengthening

Plans that have been published reflect developments in health and border systems strengthening:

1. Easing Border Restrictions (EBR) Plan
2. Critical Preparedness, Readiness and Response (CPR) Plan.

The aim of the EBR Plan was to outline Te Marae Ora's actions regarding the phased and safe easing of border restriction measures while minimising public health risks to Cook Islands residents and visitors. The EBR Plan included a border control matrix designed to inform decisions, based on the disease transmission patterns in the country from which passengers would be arriving. The CPR Plan described Te Marae Ora's health systems strengthening measures, in order to be in a position of readiness to respond effectively and to mitigate the threat and impact of COVID-19.

Border control measures and the economy

The earlier part of the national emergency response to COVID-19 focused heavily on border closures, giving time to strengthen in-country health systems processes. The Cook Islands is one of few Pacific countries to provide a variety of travel exemptions that has facilitated entry to the Cook Islands for

Cook Islands residents and permit holders, while keeping COVID-19 at bay. The following border measures have been implemented in the Cook Islands. (Table 1)

Table 1: Cook Islands border control measures according to disease transmission patterns in NZ

NZ disease transmission	NZ Alert Level	Cook Islands Border measures	Travel advisory (Closed Border)
First case Feb 28 Community transmission	NZ Level 3 – March 23 NZ Level 4 – March 25 NZ Level 3 – April 27 NZ Level 2 – May 13 NZ Level 1 – June 8	SQMC (NZ, Cook Is.) travel from May 16 Repatriation: 260 PAX, May 16, 23, 30. SQMC – Holiday Inn (AKL) 14 days, test Day 5, Day 12, SQMC Edgewater Hotel 14 days, Day 6, Day 13	Exemptions for Cook Islanders and work permit holders
No new cases, May 1	NZ Level 1 – June 8	Border closed after May 30 Quarantine free travel from Jun 20 Weekly flights = eight	Border closed Exemptions for Cook Islanders and work permit holders
AKL Cluster, Aug 11 n=179, deaths = 3, last case Sep 27	AKL – L-3 Aug 12, NZ L-2 AKL – L-2.5 Aug 30, NZ L-2 AKL – L-2.5 Sep 21, NZ L-1 AKL – L-2 Sep 23, NZ L-1 AKL – L-1 Oct 7, NZ L-1	Border closed after Aug 8 SQMC (Cook Is.) travel from Sep 5	Border closed
Post 14 days MIF arrivals from India, n=2 Oct 2, Oct 15	AKL – L-2 Sep 23, NZ L-1 AKL – L-1 Oct 7, NZ L-1	NZ exit test, health clearance SQMC 14 Days Raro, test Day 6, Day 13, 24/7 monitoring Weekly flights = eight <u>9th flight due to depart AKL Oct 31</u>	Exemptions for Cook Islanders and work permit holders
Tauranga Ports 17 Oct n=4, last case 22 Oct	NZ Level 1 – Oct 7		
MIF arrivals Russia/Ukraine, 235 fisherman n=29, last case 26 Oct	NZ Level 1 – Oct 7		
MIF arrivals incursions ongoing Nov-Dec	NZ Level 1 – Oct 7	Quarantine free travel from Oct 31 Weekly flights	

Although border measures have kept COVID-19 out, the social and economic consequences have been severe. Job losses particularly in the hospitality industry have resulted in some returning to subsistence and commercial fishing and farming largely supplying the domestic market. The transition from a tourist and consumerism-driven economy to a producer-driven agri-tech economy has been a necessary reality. Fundamental to the sustainable recovery of the Cook Islands economy is the rapid transition to innovative diversified economic portfolios that are inclusive and grow resilient industries and communities.

Clearly, easing border restrictions is necessary to resuscitate the economy however, this process requires a clear understanding of the disease transmission patterns in countries where travellers are originating, the availability of exit/entry screening and testing for travellers, health systems preparedness and readiness to respond to any threat, the community's acceptance of the proposed measures, compliance with human rights principles, and the public's ability to maintain public health measures including physical distancing.

Critical preparedness, readiness and response strengthening

While border measures and travel exemptions have been in place, Te Marae Ora has focussed on strengthening health and community systems. In general this work has included the following key areas:

- Country-level coordination, planning and monitoring
- Incident management, planning, administration and coordination
- Non pharmaceutical public health measures, including physical distancing, at points of entry
- Enhanced surveillance and testing regimes

- Establishment of risk assessment, rapid response teams and case investigation
- Risk communication and community engagement
- Domestic travel considerations
- Essential health services
- Infection control and prevention (IPC) and Personal Protective Equipment (PPE)
- Mental health and psychosocial support
- Laboratory services
- Operational logistics
- Case management and clinical preparedness
- Patient care pathways and health care delivery
- Health care costs and financial protection

An important strategy has been to administer 5,000 influenza vaccines to border/frontline personnel, as well as older and vulnerable persons (33% population coverage). High child immunisation coverage >95% has provided additional protection against vaccine preventable diseases. Existing vaccine distribution mechanisms will be important when the COVID-19 vaccine becomes available in 2021.

Risk communication and community engagement

Te Marae Ora along with other government agencies continues to inform and engaged the community on COVID-19. This involved establishing a COVID-19 website and Facebook page to share information on the national response along with developed information and education resources highlighting the public health measures people needed to take to protect themselves and their families. Tele-meetings via Zoom have helped connect populations so that communication with various community groups on Rarotonga and the Pa Enua could continue. Te Marae Ora continues to maintain regular engagement with communities through decentralised health services on Rarotonga and weekly tele-zoom meetings with the Rarotonga Puna and Pa Enua.

The re-orientation of Te Marae Ora health services

In the past two years, there has been focused attention on lifting the Cook Islands health system and quality of services in order to achieve universal health coverage. This is necessary in light of the four existential threats facing the Cook Islands; COVID-19, the non-communicable diseases epidemic, climate change and anti-microbial resistance.

Health system improvements

Te Marae Ora has invested substantial improvements across the health system. This has included the revision of clinical, public health, health management protocols, guidelines, plans, standard operating procedures and upskilling and training of the health and border workforce and general population on IPC and PPE. Strengthened IPC protocols and procedures as well as the stockpiling and enhanced distribution networks and pre-positioning of PPE (masks/gloves) in Rarotonga and Pa Enua health facilities have been critical to ensure the health system is ready to respond.

Acknowledging the value and importance of a skilled, competent and adequately remunerated workforce, the development of a new health professionals pay structure and 12 health career pathways: health protection, health promotion, mental health, oral health, medical practitioners, nursing, laboratory, pharmacy, radiology, biomedical, physiotherapy, paramedics with pay parity adjustments has been critical to benchmark workforce development plans.

Government is supporting significant capital projects (PCR lab, CT scan, Oxygen plant, ICT). The ICT upgrade to infrastructure, hardware and software (including a new patient information management system (PIMS), Laboratory information management system (LIMS) and Picture Archiving Computer (PAC) system for radiological imaging are critical to inform clinical management.

Organisation restructure and Universal Health Coverage

The organisation restructure of Te Marae Ora beginning mid-2018 was designed to ensure a more efficient clinical decision-making process in both hospital and community settings and to reorient the health system and service delivery model to focus on primary health care and preventive community based health services.

Phased over time, the November 2020 structure seeks to achieve universal health coverage through the shifting of health and human resources to community settings thus placing preventative and primary health care services closer to people. Secondary and tertiary level services continue to be provided in hospital settings and are complemented by visiting specialists to Rarotonga and the Pa Enua, and/or referral of patients to the New Zealand health system.

The new structure includes the establishment of 0.2 FTE chief medical officer and chief nursing officer advisory roles to the Secretary of Health as well as nurse manager positions in hospital, community services, and planning and funding directorate. Mental health services have expanded and are currently positioned under the Public Health Directorate to develop before lifting out into a separate Directorate. The recent graduation of two doctors with the Cook Islands General Practitioners Fellowship adds to the primary care workforce capacity development.

Decentralising the health system

The national emergency response included the opening of the coughs and flu clinic on 03 February 2020 and the setting up of 10 pre-determined Rarotonga Puna – local district emergency operating centres (EOCs) as part of the disaster risk management response. Limited public health nurse-led health services were provided in each of the 10 Puna EOCs on Rarotonga, in preparation for the detection of COVID-19 cases requiring a public health response. The EOC's remain on standby for a COVID-19 outbreak as well as cyclone or other national disaster or emergency.

As part of the health response to COVID-19, the decentralisation of the health system (while already considered in earlier plans to lift the health system), occurred at pace. In March 2020 Rarotonga hospital-based Out-Patients and Emergency Department (OPED) services moved to Tupapa community clinic in order to secure a 32 bed isolation ward (Te Kou) at Rarotonga hospital and to protect sick hospital in-patients. The Surgical ward was moved to the space previously occupied by the hospital-based OPED services, and out-patient specialty clinic services were limited further to control visitor and patient traffic through the hospital facility.

Road and parking space upgrades at the Tupapa-based OPED has increased physical access to the facility. Refurbishment of the OPED facility includes improved waiting room space, doffing and donning rooms and IPC patient flow, supported by a stand-alone tent to assess suspected COVID-19 cases. During usual work hours, a designated general practitioner receives phone consultations and triages/manages patients. This limits face-to-face interactions and reduces patient volumes to OPED, so staff can focus on patients requiring urgent or emergency services example cardiac arrests, strokes.

Establishment of the community health clinics

Following the declaration of the Cook Islands as a COVID-19 free zone in April 2020 and the subsequent redirection of health resources to border control measures, the utility of maintaining EOC facilities and functions diminished. However, the merits of providing health services in Puna settings and closer to populations was recognised, in particular the goal of achieving universal health coverage. This resulted in the further decentralisation of the health system securing permanent health facilities and services in each of the 10 Puna on Rarotonga. Critical to the design and planning of this initiative was the inclusion of community leaders that included traditional and religious leaders.

Key factors considered were:

1. For health systems to promote universal health coverage
2. Focus on preventative and primary health care
3. Enhance community development and empowerment for better population health outcomes
4. Establish community-based facilities to contain a COVID-19 outbreak within the Puna
5. Provide alternative facilities should Rarotonga hospital/Tupapa OPED facilities not be available
6. Health facilities to be climate change resilient and Water, Sanitation and Hygiene equipped
7. Expand health workforce by recruiting community health workers from within the Puna

Since July 2020, primary health care services have been provided through 10 community health clinics in each Puna on Rarotonga, two of which are using mobile bus services for their doctor visits. The clinics are staffed by nurses, community health workers, with weekly doctor visits, and include oral health and mental health services. Pharmaceutical (medicines) and IPC/PPE stocks are delivered to each clinic during the week. Government funds have refurbished three clinics. Plans are progressing to secure funds to refurbish the remaining clinics.

The formalising of partnerships with Community Health Clinic leads within the Rarotonga Puna has been undertaken through Arrangements of Health Co-operation (AOC) between the leads and Te Marae Ora. The AOCs have an annual work plan outlining the objectives and health outcomes sought.

The COVID-19 Containment and Mitigation response framework

The International Health Regulations Emergency Committee has recommended that countries prepare for containment including active surveillance, early detection, isolation and case management, contact tracing and quarantine to prevent the onward spread of infection (locally, internationally), and to share full data with WHO.¹

Objectives

The objectives of the Cook Islands Containment and Mitigation framework are:²

- Containment of the outbreak by slowing and stopping COVID-19 transmission, prevention of outbreaks and spread and elimination of the disease
- Mitigation of the effects of an outbreak through reducing preventable morbidity and mortality, minimising negative health, social and economic impacts and facilitating early recovery
- Access to current science, technical guidance, clinical care, equipment and supplies to reduce preventable morbidity, mortality and adverse social and economic impacts
- Safe health workers through access to the knowledge, skills and resources required for safe practice, including access to PPE and optimal IPC practices and
- Non-Pharmaceutical Interventions risk communication and community engagement as key COVID-19 transmission circuit breakers.
- Efficient roll out of the COVID-19 vaccine in 2021 accompanied with the establishment of an adverse events following immunisation register

Principles of disease control and elimination³

It is important to define the outcomes sought by Te Marae Ora. Control refers to the reduction of disease incidence, prevalence, morbidity or mortality to a locally acceptable level as a result of deliberate efforts; continued intervention measures are required to maintain the reduction. Example:

¹ WHO COVID-19 Pacific Health Sector Support Plan, Phase 2 Plan Containment and Mitigation, 2020

² WHO Western Pacific Regional Action Plan for Response to Large-scale Community Outbreaks for COVID-19, 2020

³ Adapted from - Dowdle WR. The principles of disease elimination and eradication. Bull World Health Organ 1998;76 Suppl 2:23-5.

diarrhoeal diseases. Elimination of disease refers to the reduction to zero of the incidence of a specified disease (COVID-19) in a defined geographical area as a result of deliberate efforts; continued intervention measures are required. Example: neonatal tetanus. Elimination of infection refers to reduction to zero of the incidence of infection caused by a specific agent in a defined geographical area as a result of deliberate efforts; continued measures to prevent re-establishment of transmission are required. Example: measles, poliomyelitis. Eradication refers to the permanent reduction to zero of the worldwide incidence of infection caused by a specific agent as a result of deliberate efforts; continued measures to prevent re-emergence and re-establishment of transmission. Example: smallpox. Extinction refers to the specific infectious agent no longer existing in nature or in the laboratory. There is no example.

Evolution of the COVID-19 Emergency Response Framework

Recalling the Emergency Response plan from March 2020, there were two stages, and four phases. With new information regarding the behaviour of the SARS-CoV-2 virus and COVID-19 disease, the emergency response framework has evolved.

The COVID-19 Emergency Response framework identifies four stages, four levels and phases and respective thresholds and triggers (Table 2)

Table 2: Emergency Response Framework

Stage	Level	Phase	Threshold and Triggers
Readiness action stage	1	Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission	Disease is severe and spreads easily from person to person but is occurring outside the Cook Islands. The disease is controlled in New Zealand. Public health measures in place - hand washing, cough etiquette, use of face masks, and physical distancing. Minimal disruption to society such as travel advisories and restrictions.
Targeted action stage	2	Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand	Disease is severe and spreads easily from person to person, but occurring outside of the Cook Islands. The disease is not yet detected in the Cook Islands, but there is a community case in New Zealand. Moderate disruption to society, Maintain public health measures; encourage use of face masks on public transport.
	3	Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring	A case identified from the community has been detected in the Cook Islands. Border restrictions implemented. Intensify COVID-19 testing of population. Early case detection and isolation and aggressive contact tracing and quarantine to limit the number of generations of transmission. Restrictions on mass gatherings. Non-essential services closed for a period of 24-48 hours. People encouraged to work from home. Face coverings mandatory.
	4	Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring	More than one case of the disease is present in the Cook Islands. Border restrictions implemented. Self-isolation and quarantine required for recent arrivals for a minimum period of 14 days. Intensify COVID-19 testing of population. Early case detection and isolation and aggressive contact tracing and quarantine to limit the number of generations of transmission. No mass gatherings. Non-essential services closed. People encouraged to work from home. Face coverings mandatory.

The COVID-19 Response Framework and Targeted Interventions

Within each of the action stages are targeted interventions under the following functions: governance and legislation; surveillance and intelligence; border measures; resources and logistics; communication and consultation; health critical care and public health management; and social welfare and support (Table 3).

Table 3: COVID-19 response framework and targeted interventions

Functions	Readiness action stage	Targeted action stage		
	Level 1: Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission	Level 2: Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand	Level 3: Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring	Level 4: Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring
Governance and Legislation	<ul style="list-style-type: none"> Assess and advise on declaration of State of Emergency Convene NDRMC, NRE, NHET. 	<ul style="list-style-type: none"> Emergency governance arrangements – NDRMC, NHET, NRE Activate IHR reporting requirements. 	<ul style="list-style-type: none"> COVID-19 declared transmissible notifiable condition and dangerous condition Assess and advise on declaration of State of Emergency Convene NDRMC, NRE and NHET 24/7 coverage of National Emergency Operations Centre Possibility of Parliament convening urgently to pass relevant legislation Activation of Health Emergency Operations Centre and Incident Management System (IMS). 	<ul style="list-style-type: none"> Declaration of State of Emergency Emergency response fully activated Circumstances to allow Parliament to extend a public health emergency Police to maintain law and order.
Surveillance and Intelligence	<ul style="list-style-type: none"> Intensify surveillance at ports of entry Sentinel populations ILI/SARI surveillance Test selected ILI/SARI samples to identify undetected virus circulation Laboratory surveillance 	<ul style="list-style-type: none"> Activate national capacity for disease surveillance and containment Air/sea/land traffic surveillance Weather reports Monitor official and non-official reports. 	<ul style="list-style-type: none"> Monitor and analyse information Monitor flu-like symptoms presenting at clinics Community surveillance Testing lab samples overseas. 	<ul style="list-style-type: none"> Intensify surveillance Monitor all surveillance systems Community surveillance Testing lab samples overseas Monitor official and non-official reports.

Functions	Readiness action stage	Targeted action stage		
	Level 1: Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission	Level 2: Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand	Level 3: Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring	Level 4: Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring
	<ul style="list-style-type: none"> • Test hospital admissions with respiratory presentations • Test all contacts • Conduct targeted testing for high-risk individuals and settings. 		<ul style="list-style-type: none"> • Monitor official and non-official reports. 	
Border Measures	<ul style="list-style-type: none"> • Monitor incoming passengers for signs/symptoms • Assess travel restrictions and advise e.g. test before travel +/- quarantine on arrival • Health declaration and travel history • Assess entry to the Pa Enua • Maintain cargo staging areas to minimise interactions • Strict infection control procedures observed and regular decontamination • Provide logistical assistance to repatriate foreign nationals. 	<ul style="list-style-type: none"> • Monitor incoming passengers for signs/symptoms • In-flight, airport and maritime announcements • Liaise with airlines/shipping operators • Assess entry to the Pa Enua • Health declaration and travel history • Early travel restrictions (quarantine) to delay entry. 	<ul style="list-style-type: none"> • Assess travel restrictions and revise • Health declaration and travel history • Assess entry to the Pa Enua • Cargo staging areas to minimise interactions between cargo handlers at ports and workers in country • Strict infection control procedures observed and regular decontamination • Provide logistical assistance to repatriate foreign nationals. 	<ul style="list-style-type: none"> • Assess travel restrictions and revise • Assess entry to the Pa Enua • Maintain cargo staging areas to minimise interactions • Strict infection control procedures observed and regular decontamination • Provide logistical assistance to repatriate foreign nationals.
Resources and Logistics	<ul style="list-style-type: none"> • Transition to standby accommodation in communities if hospital capacity is reached • Additional resources mobilised • Emergency funds mobilised • Assess stockpiles of PPE in case of shortages • Maintain essential services. 	<ul style="list-style-type: none"> • Stockpile of personal protective equipment (PPE) example. face masks, hand gel, full gear • Health system capacity example isolation areas, flu clinics, HDU/ICU capability • Standby accommodation and infection control providers • Capacity to maintain essential services 	<ul style="list-style-type: none"> • Assess stockpiles of PPE in case of shortages • Additional resources and finances mobilised as needed • Monitor health system capacity and establish triggers if full capacity is reached • Health professionals on standby as needed 	<ul style="list-style-type: none"> • Transition to standby accommodation for isolation if full capacity is reached in health facilities • Additional resources mobilised • Emergency funds mobilised • Reassess HDU/ICU capability • Maintain essential services.

Social Welfare and Support	<ul style="list-style-type: none"> Strict visitor restrictions and access to closed communities, hospitals, isolation areas, prisons Restricted activities at higher-risk settings e.g. bars, pubs, nightclubs Support for grieving families and communities Mandatory self-quarantine/isolation Coordinate provision of services to at-risk populations e.g. elderly, disabled, chronic illness Coordinate provision of resources, food, financial assistance, special leave Individuals make necessary arrangements example stockpile essential items, childcare 	<ul style="list-style-type: none"> Welfare of residents and visitors Coordinate services to at-risk population e.g. elderly, disabled, chronic illness Individuals make necessary arrangements e.g. stockpile essential items, childcare Coordinate assistance for elderly, disabled and chronic illness groups who do not live with any family members Activities to build social resilience example counselling. 	<ul style="list-style-type: none"> Voluntary self-quarantine/isolation Possible school closures Prohibit mass gatherings example nightclubs, cultural or sports events, churches Limit access and visitation to closed communities, hospital wards, isolation areas, prisons Coordinate provision of supplies example medicines, food to isolated or quarantined people Individuals make necessary arrangements example stockpile essential items, childcare Health checks in the community. 	<ul style="list-style-type: none"> Strict visitor restrictions and access to closed communities, hospitals, isolation areas, prisons Support for grieving families and communities Mandatory self-quarantine/isolation Coordinate provision of services to at-risk populations example elderly, disabled, chronic illness Coordinate provision of resources example medicines, food, financial assistance, special leave Individuals make necessary arrangements example stockpile essential items, childcare Strict health checks in the community.

Functions	Readiness action stage	Targeted action stage		
	<p>Level 1: Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission</p> <ul style="list-style-type: none"> • Strict health checks in the community. 	<p>Level 2: Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand</p>	<p>Level 3: Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring</p>	<p>Level 4: Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring</p>

Health and community response measures

Transmission scenarios help in identifying gaps in preparedness, readiness and response measures. Health and community response priorities will shift according to disease transmission patterns. Four transmission scenarios highlight key health and community response measures and progress regarding policies and plans (see Table 4).

Table 4: Disease transmission scenarios, response measures and progress

Transmission scenarios	Response measures	Progress
<p>Level 1: Prepare The disease is not present in Cook Islands and controlled in NZ (no cases of community transmission)</p>	Review administrative procedures and emergency contingency funding to ensure they support emergency procurements and human resource surge.	<ul style="list-style-type: none"> • National budget 2020/21 - \$3M contingency fund • Finance and Administration SOP • Workforce Development Plan.
	Review early warning systems at international and domestic points of entry, strengthen event-based surveillance for atypical pneumonia/ILI/SARI and clusters of acute respiratory disease in sentinel populations (example health /border staff).	<ul style="list-style-type: none"> • Risk Communication and Community Engagement Plan • Surveillance and Testing Plan • Easing Border Restrictions Plan • ILI/SARI • Sentinel sites • Establishment of Health Intelligence Unit.
	Review and revise case definitions and testing algorithms for GeneXpert technology and RT- PCR in-country testing.	<ul style="list-style-type: none"> • Public Health Protocol • PCR Laboratory operational and staff trained
	Prepare care pathways and facilities for mild, moderate, severe, critical and convalescent cases in place, including home care, patient referral and palliative care where needed.	<ul style="list-style-type: none"> • Primary Health Care SOP • Patient Referral Policy.
	Identify and prepare facilities for supervised quarantine.	<ul style="list-style-type: none"> • Supervised Isolation Quarantine Facility Operations Framework.

Transmission scenarios	Response measures	Progress
		<ul style="list-style-type: none"> • Quarantine and Isolation SOP • Supervised Quarantine policy • Infection Prevention Control in the Health Care Setting SOP <ul style="list-style-type: none"> ○ Environmental Cleaning Policy ○ Outbreak Management Policy ○ Isolation Precautions Policy ○ Standard Precautions Policy ○ Staff Infections Policy ○ Hand Hygiene Policy ○ Waste Management Policy.
	<p>Test and refine COVID-19 emergency contingency and business continuity plans, including through hospital walk-throughs to review triage, isolation facilities, high dependency beds and equipment, and IPC arrangements.</p>	<ul style="list-style-type: none"> • Emergency contingency and Business continuity plans • Weekly hospital updates – Clinical Governance meeting • Infection Prevention Control in the Health Care Setting SOP <ul style="list-style-type: none"> ○ Environmental Cleaning Policy ○ Outbreak Management Policy ○ Isolation Precautions Policy ○ Standard Precautions Policy ○ Staff Infections Policy ○ Hand Hygiene Policy ○ Waste Management Policy.
	<p>Review national stockpiles of essential medicines, laboratory consumables and supplies and whole-of-society Risk Communication and Community Engagement (RCCE) inclusive of travellers, healthcare workers and medically and socially vulnerable groups.</p>	<ul style="list-style-type: none"> • mSupply logistics reporting weekly • IPC Governance group with ToR • TMO MoU with MFEM • RCCE Plan.
	<p>Provide ongoing refresher training to clinical and public health workers and rapid response teams in the above requirements for safe and effective COVID-19 case identification, detection, containment and response activities.</p>	<p>Ongoing refresher training for:</p> <ul style="list-style-type: none"> ○ Contact Tracing ○ Review of Contact tracing SOP ○ IPC.
	<p>Anticipate and address the community support needs of medically and socially vulnerable groups with COVID-19 with other sectors.</p>	<ul style="list-style-type: none"> • Arrangement of Cooperation with relevant NGOs • Disability SOP • Elderly Care SOP • Mental Health SOP • Mental Health for Prison and Corrective Services SOP

Transmission scenarios	Response measures	Progress
		<ul style="list-style-type: none"> Family Health and Wellbeing SOP.
	<p>Monitor the utilisation rate of PPE to guide replenishment needs given global shortage of PPE and long lead times from submitting purchase orders to supply shipment and arrival in countries.</p>	<ul style="list-style-type: none"> mSupply logistics reporting IPC Governance Group Stocktake of PPE supplies monthly.
	<p>Telemedicine support to ensure ongoing refresher training of ICU staff on lung protective ventilation, optimal fluid balance and nursing care for severe and critical patients.</p>	<ul style="list-style-type: none"> Clinical protocol/guidelines ICT systems support Aeromedical Transfer SOP.
	<p>Monitoring of epidemiological trends regionally and internationally (aggregated data).</p>	<ul style="list-style-type: none"> Sitreps Health system reports.
<p>Level 2: Reduce The disease is not yet detected in the Cook Islands but there is a community case in New Zealand</p>	<p>Reinforce and monitor physical distancing measures in health care facilities example by limiting visitors, establishing coughs and flu clinics with a one-way patient flow, and the use of PPE and IPC measures to prevent amplification of transmission in these settings and to protect HCWs and vulnerable patients.</p>	<ul style="list-style-type: none"> Infection prevention in the Health care setting SOP Environmental Cleaning Policy Outbreak Management Policy Hospital SOP Primary Care SOP Isolation Precautions Policy Standard Precautions Policy Staff Infections Policy.
	<p>Contribute to the regional and global understanding of the epidemiology and clinical spectrum of COVID-19 by participating in the First Few X cases early investigation protocols (FFX)</p>	<ul style="list-style-type: none"> Public Health Protocol Coronavirus Case Notification, Case Investigation and Contact Tracing for COVID 19 SOP Ongoing contact tracing refresher training.
	<p>Early identification of clinical deterioration to ensure optimal oxygenation and fluid balance to avoid the need for intensive care. Critical equipment and supplies include pulse oximeters, oxygen concentrators, high flow oxygen non-rebreather masks with reservoirs, as well as ventilators</p>	<ul style="list-style-type: none"> HDU/ICU support system Installation of Oxygen Plant and Oxygen line Upgrade of electrical wiring for Rarotonga Hospital Tupapa Public Health and administration building completed ICT upgrade enables for LIMS (Lab information) for PCR lab, PACS (Picture archiving computer system) for CT scan Negative pressure rooms (two) completed at Rarotonga Hospital CT scan progressing RT-PCR laboratory operational
	<p>Safe management of ventilated patients, including human resource management plans for medical, nursing staff and auxiliary staff.</p>	<ul style="list-style-type: none"> HDU/ICU Guidelines Public health Protocol: Ill Traveller.

Transmission scenarios	Response measures	Progress
		<ul style="list-style-type: none"> • Staff Infections Policy
<p>Level 3: Restrict The disease has been detected in the Cook Islands (<i>first case</i>)</p>	<p>Early case detection and isolation and aggressive contact tracing and quarantine to limit the number of generations of transmission. As the number of contacts and generations of transmission can increase rapidly and exceed contact tracing capacity, conduct planning for targeted contact tracing of high-risk exposures (that is close contacts, closed settings and mass gatherings).</p>	<ul style="list-style-type: none"> • Public Health Protocol Coronavirus • Critical Preparedness, and Readiness Response Plan to Coronavirus Disease 2019 • Quarantine and Isolation SOP • Supervised Quarantine policy • Secretary of Health Category Quarantine Orders SOP • Case Notification, Case Investigation and Contact Tracing for COVID 19 SOP • Isolation Precautions Policy • SIQF Operations Framework.
	<p>Activate care pathways for mild, moderate, severe, critical and convalescent cases, including home care, patient referrals.</p>	<ul style="list-style-type: none"> • Public health Protocol: Ill Traveller • COVID-19 Aeromedical Transfer of Patients SOP • Nursing SOP.
	<p>Monitoring of epidemiological trends (aggregated data) and impact on the health service.</p>	<ul style="list-style-type: none"> • Sitreps • Health system reports, • Go.data • Establishment of the Health Intelligence Unit.
	<p>Arrangements for the continuation of essential clinical and public health services, including childhood immunisation, obstetrics, emergency surgery, NCD and chronic infectious disease medications and palliative care.</p>	<ul style="list-style-type: none"> • Critical Preparedness, and Readiness Response Plan to Coronavirus Disease 2019 • Essential Services Policy • Elderly Care SOP • Public Health Nurses SOP.
	<p>Working with communities for culturally appropriate, safe burials and cremation.</p>	<ul style="list-style-type: none"> • Restrictions on Funeral and Burial Services policy.

Transmission scenarios	Response measures	Progress
Level 4: Lockdown The disease has been detected in the CI >1 case, community transmission may be occurring	Continuation of essential health services to prevent the resurgence of epidemic and endemic diseases and preventable mortality, including ensuring access to medically and socially vulnerable groups.	<ul style="list-style-type: none"> • Containment and Mitigation Plan • Critical Preparedness, and Readiness Response Plan to Coronavirus Disease 2019 • Surveillance and Testing Plan • Public Health Protocol Coronavirus • Pa Enea Travel SOP • Medical Clearance Guide to travel to the Pa Enea SOP.
	Implement layered non-pharmaceutical interventions (NPI) such as physical distancing measures in community settings (example self-quarantine, limiting the size of gatherings, cancelling mass gatherings and social events, school closures, lockdown).	<ul style="list-style-type: none"> • Public Health Protocol Coronavirus • Risk Communication and Community Engagement Plan • Essential Services Policy.

Table 5: Disease transmission scenarios and containment and mitigation activities

Transmission Scenario	Level 1: Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission.	Level 2: Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand.	Level 3: Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring.	Level 4: Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring.
Definition	No cases.	The disease is not yet detected but there is a case of community transmission in New Zealand.	A case identified from the community has been detected in the Cook Islands.	There are more than one case in the Cook Islands
Phase	Delay entry of disease	Delay entry of disease	Contain and Mitigate impact of disease	Contain and Mitigate impact of disease
Focus of efforts	Containment	Containment	Containment	Mitigation
Aim	Stop transmission and prevent spread	Stop transmission and prevent spread	Stop transmission and prevent spread	Slow transmission, reduce cases, end community outbreaks
Emergency response mechanisms	Activate emergency response mechanisms	Enhance emergency response mechanisms	Scale up emergency response mechanisms	Scale up emergency response mechanisms
Risk communication and public engagement	Educate and actively communicate with the public through risk communication and community engagement	Educate and actively communicate with the public through risk communications and community engagement	Educate and actively communicate with the public through risk communication and community engagement	Educate and actively communicate with the public through risk communication and community engagement
Public Health Measures	Hand, face hygiene, respiratory etiquette, physical distancing, avoid closed, crowded, enclosed spaces, disinfect surfaces, wear face masks when ill, or in crowded, enclosed spaces	Hand, face hygiene, respiratory etiquette, physical distancing, avoid closed, crowded, enclosed spaces, disinfect surfaces, wear face masks when ill, or in crowded, enclosed spaces	Hand, face hygiene, respiratory etiquette, physical distancing, avoid closed, crowded, enclosed spaces, disinfect surfaces, wear face masks when ill, or in crowded, enclosed spaces	Hand, face hygiene, respiratory etiquette, physical distancing, avoid closed, crowded, enclosed spaces, disinfect surfaces, wear face masks when ill, or in crowded, enclosed spaces
Surveillance	Test for COVID-19 using existing respiratory disease surveillance systems and hospital, community based surveillance	Implement COVID-19 surveillance using existing respiratory disease surveillance systems and hospital, community based surveillance	Expand testing for COVID-19 using existing respiratory disease surveillance systems and hospital, community based surveillance	Adapt existing surveillance systems monitor disease activity (example through sentinel sites)
Laboratory testing	Test probable, confirmed cases and contacts, test patients identified through respiratory disease surveillance	Test probable, confirmed cases and contacts, test patients identified through respiratory disease surveillance	Test probable, confirmed cases and contacts, test patients identified through respiratory disease surveillance	Test probable, confirmed cases and contacts, test patients identified through respiratory disease surveillance. If testing capacity is overwhelmed

Transmission Scenario	Level 1: Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission.	Level 2: Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand.	Level 3: Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring.	Level 4: Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring.
				prioritise testing in health care settings and vulnerable groups.
Case finding, contact tracing and management	Conduct active case finding contact tracing and monitoring, quarantine of contacts and isolation of cases	Enhance active case finding contact tracing and monitoring, quarantine of contacts and isolation of cases	Intensify case finding contact tracing and monitoring, quarantine of contacts and isolation of cases	Continue contact tracing where possible, especially in newly infected areas, quarantine of contacts and isolation of cases, apply self-initiated isolation for symptomatic individuals
Case Management	Prepare to treat patients. Ready hospital and community facilities for potential surge	Treat patients and ready hospital and community facilities for surge, finalise triage procedures	Treat patients. Ready hospitals and community facilities for potential surge, revise triage procedures	Prioritise care and activate triage procedures. Scale up surge plans for health and community facilities
	Promote self-initiated isolation of people with mild respiratory symptoms to reduce the burden on health system	Promote self-initiated isolation of people with mild respiratory symptoms to reduce the burden on health system	Activate surge plans for health and community facilities	Implement self-initiated isolation of people with mild respiratory symptoms to reduce the burden on health system
Infection Prevention and Control	Train staff in IPC and clinical management for COVID-19	Train staff in IPC and clinical management for COVID-19	Train staff in IPC and clinical management for COVID-19	Retrain staff in IPC and clinical management for COVID-19
	Prepare for surge in health and community facility needs, including respiratory support and PPE - report stocks supplies weekly	Prepare for surge in health and community facility needs, including respiratory support and PPE - report stocks supplies daily	Advocate for home care for mild cases, if health care systems are overwhelmed, and identify referral systems for high risk groups	Implement health and community facilities surge plans - report stocks supplies twice daily
Societal Response	Develop all-of-society and business continuity plans	Implement all-of-society, repurpose government and ready business continuity plans	Implement all-of-society resilience, repurpose government, business continuity, and community services plans	Implement all-of-society resilience, repurpose government, business continuity, and community services plans

Critical complementary response mechanisms

The role of non-pharmaceutical interventions ‘circuit breakers’

Non-pharmaceutical interventions (NPI) and preventative public health measures remain the cornerstone for protecting the population even when vaccines and/or therapeutics arrive.

These NPI include:

- Wash your hands with soap and water (or use an alcohol-based hand sanitiser)
- Practice pragmatic physical distancing (at least two metres) where possible
- Cover your coughs and sneezes
- Avoid touching your face (eyes, nose and mouth) with unwashed hands
- Stay home when unwell
- Wear a face mask if unwell, in public, crowded or enclosed spaces
- Clean and disinfect frequently touched surfaces and objects
- Limit time spent in crowded or enclosed spaces
- Protect vulnerable members of our communities
- Avoid hugs, kisses or shaking hands
- Avoid shouting and singing in crowded and enclosed spaces
- Avoid spreading misinformation

Border control measures

Enhanced border control measures with pre-departure testing for international travellers as well as domestic travellers alongside NPI are critical to assist in keeping COVID-19 out, and/or control and elimination measures.

Risk communication and community engagement

Robust risk communications and community engagement (RCCE) measures ensure the public is well informed and able to take action to protect themselves, their families and communities. Working in partnership with the community through the Puna and Community Health Clinics is critical to ensuring the country can pivot quickly when responding to a case or outbreak.

Surveillance and risk assessment

Gathering information through multi-sourced surveillance activities helps in the early detection, assessment of risk, severity, speed of transmission, and extent of COVID-19, and helps inform national decisions regarding international and domestic border restriction measures (Rarotonga International Airport, sea ports) and communication for community action.

Laboratory services and testing strategies

Testing strategies for COVID-19 will change depending on surveillance activities for ILI/SARI cases, border intrusions, and contact tracing. Ensuring public trust requires a competent testing, tracing and isolation.

Case and contact management

The purpose of case and contact management is to detect and interrupt transmission in chains. Monitoring and reporting should ensure gaps are quickly identified and mediated. Case and contact management includes widespread testing of close contacts – symptomatic and asymptomatic (where they are at high risk).

Operational logistics

This is critical to the Cook Islands COVID-19 response and ensuring we have sufficient supply of PPE, test kits/reagents, medical equipment and supplies. With fragile global supply chains and

one flight a week and fortnightly shipping, procurement of essential supplies requires close monitoring and ordering of supplies for the health and national response.

Ensuring health services for all

Te Marae Ora has gradually moved from providing essential health services in the early months of the emergency response to business as usual e.g. childhood immunisation and other child health services, reproductive health, safe deliveries and neonatal care, trauma and medical, surgical and emergency services, however, this has placed additional stressors on a stretched workforce. The phased resting of the health workforce continues to be a challenge.

Vulnerable populations groups such as the elderly, children, youth, those who are disabled or living with mental illness, migrant workers, and prison inmates are at risk of further hardship with non-pharmaceutical interventions and border control measures. It is important to ensure plans are in place to mitigate the impact on vulnerable populations.

Health care costs and financial protection

In the first half of 2020, \$5M was budgeted to fund the national COVID-19 response. This was used to purchase essential equipment (example ventilators, oxygen concentrators), establishing 10 Puna on Rarotonga to support the response, organising nationwide communications to inform and educate our communities, fund repatriation and supervised quarantine of stranded residents in New Zealand. In the second half of 2020, \$3M has been set aside for the COVID-19 response. This funds are administered by the Ministry of Finance and Economic Management.

Te Marae Ora Cook Islands Ministry of Health Influenza Pandemic Plan 2009.

Annex 1: The Cook Islands Emergency Response Plan to COVID-19

The plan has two stages, four levels and phases as outlined below.

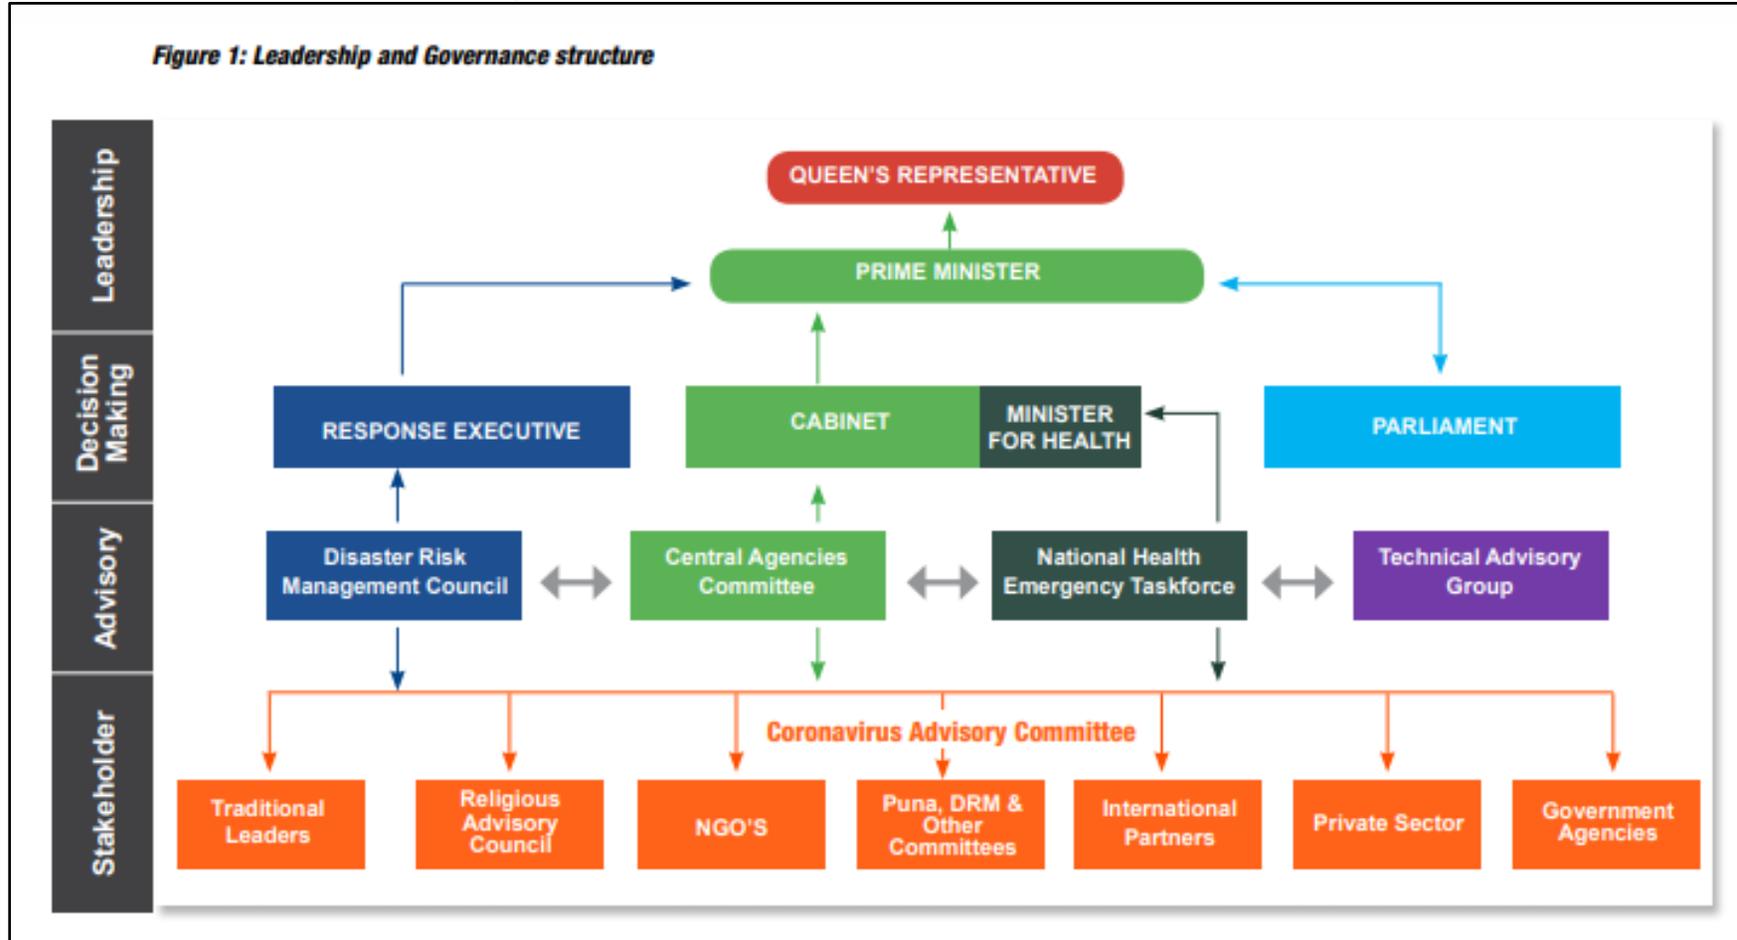

Table 6: Stages, Levels and Phases

Stage	Level	Phase
Initial action stage	1	Prepare COVID-19 is not present in Cook Islands and controlled in New Zealand with no cases of community transmission
Targeted action stage	2	Reduce COVID-19 is not present in the Cook Islands but there is a community case in New Zealand
	3	Restrict COVID-19 has been detected in the Cook Islands and community transmission may be occurring
	4	Lockdown There is more than one case of COVID-19 in the Cook Islands and community transmission may be occurring

Within each of the action stages are targeted interventions under the following functions: governance and legislation; surveillance and intelligence; border measures; resources and logistics; communication and consultation; health clinical care and public health management; and social welfare and support. Annex II Incident Management System refers to specific roles and responsibilities.

Annex 2: Governance and Leadership
